DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 and 35-39 are allowed over the Prior Art of record.
2. The following is an examiner's statement of reasons for allowance: As to claim 1, the primary reasons for allowance is the inclusion of the limitations of a fluid level gauge for sensing the fluid level in a dispenser including an inlet port in fluid communication with the fluid and check valve including a membrane, the membrane allowing air to pass (i.e. semi-permeable, permeable to air, but not to the fluid) and a pressure sensor in fluid communication with the check valve (i.e. fluid communication in the sense the air allowed to pass is a fluid). As to claim 8, the primary reasons for allowance of the claim in the inclusion of the limitations of a fluid level gauge for a beverage dispenser including a check valve including a membrane to limit communication between a first and second tube, wherein the second tube is in communication with the check valve at a first end and a in communication with a pressure sensor at a second end. As to claim 37, the primary reasons for allowance is the inclusion of the limitation of an apparatus for displaying the level of a fluid in a beverage dispenser including a conduit in fluid communication with the beverage to be dispensed, a pressure sensor operably connected to the conduit so as to sense the pressure within the conduit; and a membrane located in the conduit, and positioned to limit the communication of the beverage within the conduit.

None of the Prior Art teaches on the instant invention, in particular, the employment of amembrane that is permeable to air and impermeable to fluid/beverage to limit communication of the fluid/beverage to the sensor measuring the pressure and thus indicating a fluid/beverage level.
